24 GA FOR 24 GAUGE ONLY

Not available on 26 or 28 gauge

What is PVDF?

PVDF stands for polyvinylidene fluoride. It is a fluoropolymer paint system baked onto the steel at the coil mill, before the coil ever reaches our shop.

PVDF is the premium finish in metal roofing. It is chosen where long-term color and gloss retention matter most, on homes and on commercial and architectural roofs.

- **Excellent fade and chalk resistance.** The finish is built to hold its color and gloss in strong sun.
- **Hard, durable surface.** It stands up to handling, forming and install.
- **Finish warranty.** Ask us for the PVDF finish warranty terms for your project.

Two finishes

Smooth

The classic smooth painted-steel look, including our matte black.

Textured

A low-gloss, lightly textured surface in four select colors.

24 GA
ONLY

Every color on this chart is for 24 gauge steel only. 26 and 28 gauge panels and trim use a different paint system (SMP) with a separate color chart. If you are ordering 26 or 28 gauge, ask us for the SMP colors.
