What is SMP?

SMP stands for Silicone-Modified Polyester. It's a paint system baked onto the steel at the coil mill, before the coil ever reaches our shop. A polyester paint gets silicone blended in, which makes the finish harder and helps it hold its color and gloss in the sun.

SMP is the standard finish on residential, agricultural and light commercial metal roofing. It's a durable finish at a price that makes sense for most roofs.

- **Fade and chalk resistant.** Silicone helps the color and gloss hold up under UV.
- **Hard, scratch-resistant surface.** It stands up to handling, forming and install.
- **Two-coat system.** Primer plus top coat over a Galvalume®-coated steel core, with a backer on the underside.
- **40-year Limited Lifetime finish warranty.** Covers peeling and flaking for 40 years, and chalk and fade for 30 years - see the warranty document for full terms.

Two finishes

Premium Textured

A low-gloss, lightly textured surface.

Premium Smooth

The classic smooth painted-steel look. Our widest color range.

26 & 28 GA
ONLY

Every color on this chart is for 26 and 28 gauge steel only. 24 gauge panels and trim use a different paint system (PVDF) with a separate color chart. If you're ordering 24 gauge, ask us for the PVDF colors.
